Dawaiian Gazette

MARCH 31, 1891.

ELECTRIC LIGHTING.

In this issue we publish the preliminary prospectus of another new company, its object being the supply of dwellings and offices with electric light. It is proposed to form a joint stock company for this purpose, and subscriptions are asked for a capital stock of \$40,000 in 1,600 shares of \$25 each, par value, to be paid in instalments as re-

The services of Mr. Wm. V. Lockwood, a practical electrical engineer, have been secured, agreements for necessary leases negotiated, and specifications for plants complete, capable of furnishing 1,200 lights each, if required, have been made. The proposed price is fixed at 75 cts. per light per month.

The company has wisely determined to use steam for its motive power, water power not being always at command, as has been frement electric light works. And the idea of the company has been so readily taken up, that it is held to two plants equal to supplying 1,000 lights each, with of course provision made for enlarging the field of

by the Government or by private undertaking; and the sense of the community, outside the House at all events, seemed to be in favor of the Government taking the street lighting, and private enterprise the domestic lighting, and the oft repeated failures of the Government in the latter respect show that pubhe opinion was in the right.

The estimates of expense and revenue appear to be very reasonably ealculated, and certainly promises fairly. There can be no doubt but this is to be a genuine undertaking, and that it will supply a long-felt want and do away with the dangerous gasoline tank.

BAD TASTE.

Those of our contemporaries who issue three pages of their paper in the native language and one in English, or what has to do duty for it, are just now indulging in practices which are to be condemned by every right-thinking person. What good can it do to anyone to take from a foreign such stuff as was reproduced the other day, ostensibly from the New York World. It is true that the Honolulu editor prefaces the article copied with the remark that "it is this be the case, then why reproduce it? Why give "trashy nonsense" a new lease of life, a new field of circulation?

"Malignant falsehood" would better describe the article in question. Most of the assertions are antrue, and those which have any foundation in fact are presented in so evil a garb as to be as harmful as if they were wholly false. The article is "said to be from Honolulu." If it be so, it looks as if a sympathizing editor has supplied an anonymous libetler with an indirect opportunity of being read when he would scarcely have done the same in a more direct manner.

Another bi-lingual flatly asserts that all the police justices, sheriffs, and deputy-sheriffs outside of Honolulu are in a criminal conspiracy against the rights of laborers, and are in league with employers as against those employed. Perhaps some of the gentlemen thus aspersed may think it worth while to defend themselves. Then some more of the stuff about hundreds of slaves smarting from daylight to dark under the lash of the overseer, and some more about "sanctimonious" persons whose qualification for the title seems to be that France has increased in the last they go to church on Sunday instead of Saturday, make the sheet referred to one to be devoutly avoided.

A Correction.

MR. EDITOR :- The Builetin mentions this evening that I was the first to receive Dr. Koch's lymph from Berlin. I wish to rectify this statement, as my friend Dr. Lutz received some two weeks. I believe, before I did, and made the first injection on myself on Sunday, March 15th, 1891.

Yours respectfully. G. TROUSSEAU. Honolulu, March 25, 1891.

King Kalakana's Will and the Succession to the Throne.

MR. EDITOR: The Will of the late King, which has been submitted to probate, is devoted almost exclusively to directing who the future Sovereigns of Hawaii are

This is a thing which he had no right and no power to do, and, in one sense, that portion of his will so much waste paper. But in another sense it is not. A number of the persons whom he selects as his successors have no claim to be considered as candidates for the Hawaiian throne, for the reason that there are a number of others, now living, of the old "alii" or chief blood of much higher rank quently instanced at the Govern- than any named in the King's will. The King's will is therefore an attempt to ignore and suppress the claims of these others, and to lead the people to forget that there are be advisable to start at once with others who are entitled to consideration in the future, when the matter of creating a successor to the throne shall again come before the country.

For this reason and not because In the recent session of the Legis- I believe that the King's will has lature, it was warmly debated as to any power to carry out what is whether the lighting of the city therein directed, I wish to protest and suburbs would be better done against the future disposition of the

crown therein set forth. The people of Hawaii have some right to say who their Sovereign shall be as well as the late King.

Mangled by a Lion.

HAWAII PONOL

Paris, March 5. - A terrible scene, by which a well-known lion tamer will lose his life, was witnessed at the Hippodrome to day. The spectacle of "Nero" was being prepared, and one of the features is an attack by lions upon wooden figures arranged in the above plants would be capable of furarena to represent human bodies. nishing 1,200 lights each if required. Seets, the lion tamer, had just coneluded the day's drilling or training of six lions for this performance, and was driving them back into their cages when one of them sul-lenly refused to enter the cage, lenly refused to enter the cage. Seets managed to cage the remaining five lions and then turned his attention to the rebellious animal. Seets armed himself with a lance and tried to dislodge the refractory lion, but in so doing he tripped and lost hold of the lance. Before the lion tamer could regain possession of the weapon the angry lion sprang upon him, hurled him to the floor and bit and rent him in a most horrible manner. Seets' eries for herp soon brought another trainer to the anyone to take from a foreign scene. The latter caught up the newspaper nearly two columns of lance and gallantly attacked the lion, inflicting a severe wound with the weapon. Cowed by the wound received, the lion released poor Seets and slunk into its cage. Medical assistance was promptly sent for and everything possible done to made up of trashy nonsense." If save the lion tamer's life, but the latest reports are that he is in a dying condition.

Terrific Storm.

London, March 9 .- The worst snow-storm of the season has swept over the United Kingdom to-day. The wind is blowing with fearful velocity, driving the snow around in drifts two or three feet deep. The streets are deserted both by pedestrians and vehicles, while railway communication with the suburbs of London is almost entirely cut off. Telegraphic communication with the provinces is suspended, as the wires are down in all directions. From all parts of England come stories of destruction by the storm, and shipping has suffered heavily. The English channel is simply an expanse of boiling, seething water, dashing over the pier at Dover, and washing everything away. Across the channel steamers are arriving in a battered condition. with passengers very wet, and their faces of a yellow hue tell the story of their experiences. There was extraordinary spectacle on the Strand when the theatres were over to-night.

There were 5,759,856 savings bank books in France on last January 1st, against 5,224,856 on January 1, 1890. The deposits for I890 were 869,500,000 francs, or 104,000,-000 more than in 1889. The total sum of savings banks deposits in year 2,683,500,000 francs to 2,996,-000,000.

PRELIMINARY PROSPECTUS

Of the Hawaiian Electric Com-

The rapid growth which has taken place within a few years in the utilization of electricity for the purposes of civilized communities illustrates the avidity with which mankind avails itself of economic and convenient discoveries in the application of natural forces.

The lighting of the streets of Honolulu by electricity has been beneficial, and, so far as it has gone, satisfactory. It is

created a strong demand for such lights, tem is limited and it does not seem probable that it will be increased.

There exists a strong desire that a reliable system of lights for business places and dwellings should be made available to all parts of the city.

With the hope of accomplishing this purpose it is proposed to form a Joint Stock Company to erect works and supply lights, and power if required to the different districts of Honolulu.

It is thought advisable to commence by the erection of two plants. One to be located near the centre of business to supply business houses and public buildings in addition to such dwellings as may require it, and the other to be located on the plains in a central position which will enable it to supply the visions for asking for tenders for models, and will offer a prize for the committee also made provisions which will enable it to supply the visions for asking for tenders for models, and will offer a prize for the committee also made provisions for asking for tenders for models, and will offer a prize for the found desirable.

It is apparent from inquiries which have been made that the number of lights which will be required as soon as it will be possible to furnish them is prize. sufficient to justify the erection of a one thousand light plant at each station, with provision for the rapid duplication and increase of the inaugural power. Estimates of the cost of these two stations, including the erection of all necessary

lines are as follows: Two 80 horse-power steam plants\$ 8,000 Buildings required Buildings required

Dynamos and all connections.

St rage batteries

Wire, poses and construction..... 10.000 10,000

ESTIMATES OF THE COST OF OPERATION. Electrician and engineer at each station, at \$100 . Helper at each station, at \$50 Coal, 3 pounds per horse-power per

hour, 5 hours per day, equal 2400 pounds per day, or 36 tons per month, at \$10.

Expenses per month \$ 1,130

Income from 2000 lights at 75 cents

Or 11 1-10 per cent on \$40,000. It has been ascertained by personal canvas that the above number of lights can be placed at once on the terms now charged by the Government. The Agreements for necessary leases of lots have been negotiated. Specifications for the plants complete have been made, the promoters propose to turn these over stock, and to superintend the establishment of the business without salary until the Company is ready to supply lights. This is capitalized at a value of one tenth of the stock. The other nine-

tenths are open for subscription. The capital stock is proposed to be \$40,000, divided into 1,600 shares of the par value of \$25 each, to be paid in instalments as required.

As soon as the stock is subscribed for, the Company will be organized and incorporated, and the business be established as rapidly as possible. The whole responsibility for the prac-

tical electrical work will be assumed by Mr. Wm. V. Lockwood, electrician. Subscriptions for stock and requests for information may be made at the office of the undersigned at 42 Merchant JONA, AUSTIN.

Sub - Committees Appointed -Models to be Competed For.

The committee in charge of the matter of raising funds for the erection of a statue to the memory of our late King are pushing the matter with energy.

A meeting was held Thursday, at which a sub-committee was appointed to make some arrangements with the press. The matter of a hoped that the system will be extended model was taken up. The model, The furnishing of incandescent lights | received by the Zealandia on its late for buildings by the Government has trip, made by the sculptor Rupert Schmid, of San Francisco, was exbut the extent of the incandescent sys- amined. This sculptor was the one who requested of Colonel Geo. W Macfarlane the privilege of making a plaster paris cast from the dead king's face just before the remains were shipped here. The Colonel, however, refused on account of considerations for the feelings of the Queen Dowager and others.

The model that was sent down, and is now to be seen at the office of G. W. Macfarlane & Co., is not a very good one. The face is considerably thinner than it should be, and the lower part of the legs is not

best. Some very good bust models are to be had in Honolulu, made by local sculptors, and it is likely that some home talent may win the
